CYBERNETIC SYSTEMS WITH SELF-CHANGING ADJUSTMENT. Jan 61 [27]p. 6 refs. RTS 1669.
Order from LC or SLA ml\$2.70, pb\$4.80 61-15736

Trans. of Avtomatyka (USSR) 1958, no. 2, p. 30-47.

Attempts are made to develop common methods of calculation and investigation, and a common theory of the analogous basic arrangements of various cybernetic systems. The self-changing adjustment systems, and examples, are investigated and compared with other cybernetic systems. It is concluded that it is impossible to draw a clear line between cybernetic and non-cybernetic systems of automatic control since usual non-oscillatory feedbacks were known long before the appearance of cybernetics. A system may be called cybernetic if it (1) does not contain special elements of logical action, (2) solves new adjustment problems more complicated than old pre-cybernetic ones, and (3) solves problems of stabilization or programme and follow-up adjustment.
